

The Maschina Papers

September 20, 2026

Version 1.0

A complete description of the system, its guarantees, and what it becomes

Asher Wilson, Founder

asher@maschina.dev

Abstract

Sixteen documents describing Maschina in full: the problem it exists to solve, the architecture that solves it, the economics that sustain it, and the order in which it arrives. Each written to be read on its own. Together they are the complete account of what Maschina Labs is building and what it refuses to build.

How to read these

Start with the primer. It is one page and it contains the entire argument in miniature. If the argument persuades you, the whitepaper gives it in full, with the evidence attached.

After that the papers divide into three groups. The system itself is described in the architecture, security and machine papers. What the system is for is described in the surface, network, economy and integrity papers. What it means commercially is in the economics, path and disclosure papers.

Read the disclosures before you put money anywhere near this. They state exactly what is operational today, what is not, and what nobody should assume.

Paper	Subject
01 Primer	The whole argument, on one page
02 Whitepaper	The complete thesis, design and evidence
03 Protocol and Architecture	How the system is built
04 Security and Custody	Where money sits, and what cannot reach it
05 The Machine	The unit of the system
06 The Surface	Everything a machine can do with money
07 The Network	Whose computers this runs on
08 The Machine Economy	What machines can do with each other
09 Integrity	Reputation, asset safety, and issuance that cannot be exited
10 Economics	How Maschina earns, and what it never charges for
11 The Path	The order things arrive in, and why that order
12 Using Maschina	For owners and traders
13 Building on Maschina	For developers
14 Risk and Disclosures	Risk, legal position, operational status

A note on the claims in these papers

Every factual claim about the outside world is cited. Every claim about Maschina is either a description of the design, which is public and checkable in source, or a statement of operational status, which appears in one place and is dated.

Nothing in these papers promises a financial outcome. Nothing in them ever will.
